## It Doesn't Matter WHICH...

The increasing incidence of Necrotic Enteritis and the complexity of diagnosing it are due to the presence of Coccidiosis. Their common symptoms – diarrhea, ruffled feathers, and death – make it difficult to distinguish between the two diseases. Fortunately, it doesn't matter which of the two diseases you encounter: Coccidiosis or Enteritis.

# R Coccidiosis ROTATION P Bacterial Enteritis PROGRAM

## It's Manageable When You Rotate Using Alharma Solutions

-  Helps keep Enteritis and Coccidiosis under control
-  Preserves your production output
-  Keeps interventions working
-  ANY season ANY place
-  Offering professional support

## It Matters WHEN...

At each and every stage of any rotation program, Alharma offers the unique choices, solutions, and services you need to deal with this complex problem:

-  Ionophores – monovalent (Bio-Cox<sup>®</sup>, Salinomax<sup>®</sup>), monovalent-glycoside (Cygro<sup>®</sup>), and the only divalent (Avatec<sup>®</sup>) ionophore
-  Chemical anticoccidials (Cycostat<sup>®</sup>, Cycarb<sup>®</sup>, 3-Nitro<sup>®</sup>) for cleanup rotation breaks
-  (BMD<sup>®</sup>) for combination use with anticoccidials

It's very important not to rotate the same class of products or products with the same mode of action.
