

# TROVAC<sup>®</sup> - AIV H5

The Unique Alternative for AI Control, Proven Safe and Effective

TROVAC<sup>®</sup> -  
AIV H5

## TROVAC® - AIV H5

- The first fowl pox vectored vaccine for AI containing an H5 AIV insert
- Provides early protection in both broilers and replacement pullets
- Easy to use, can be administered at day-old in the hatchery
- Proven to be highly effective in preventing morbidity and mortality due to H5 highly pathogenic AI
- To date, used safely and effectively in more than 1 billion chickens
- Provides immunity for up to 20 weeks post vaccination
- Does not spread to unvaccinated chickens
- Does not interfere with routine serological surveillance for AI
- Can be used with Marek's disease vaccine (serotype 2 & 3)
- Also proven to be highly effective in protecting against challenge with fowl pox
- Freeze dried for easy transport and storage
- Available in 1000 dose sizes

## Features and Benefits of TROVAC® - AIV H5

### Feature 1

Easy to Use Day-Old Administration

### Benefits

- Can be administered to a large number of birds efficiently at the hatchery
- Can be administered in a controlled environment
- Eliminates the biosecurity risks of on-farm vaccination crews

## Feature 2

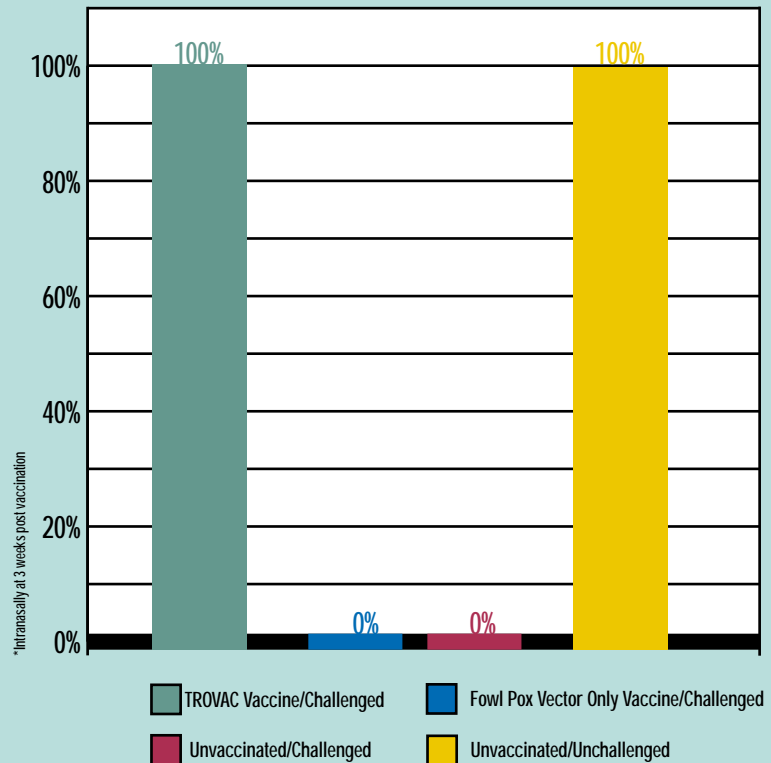

Provides early and effective protection

### Benefits

- Can be used for either broilers or replacement pullets
- Can be used in healthy birds being placed in an outbreak area

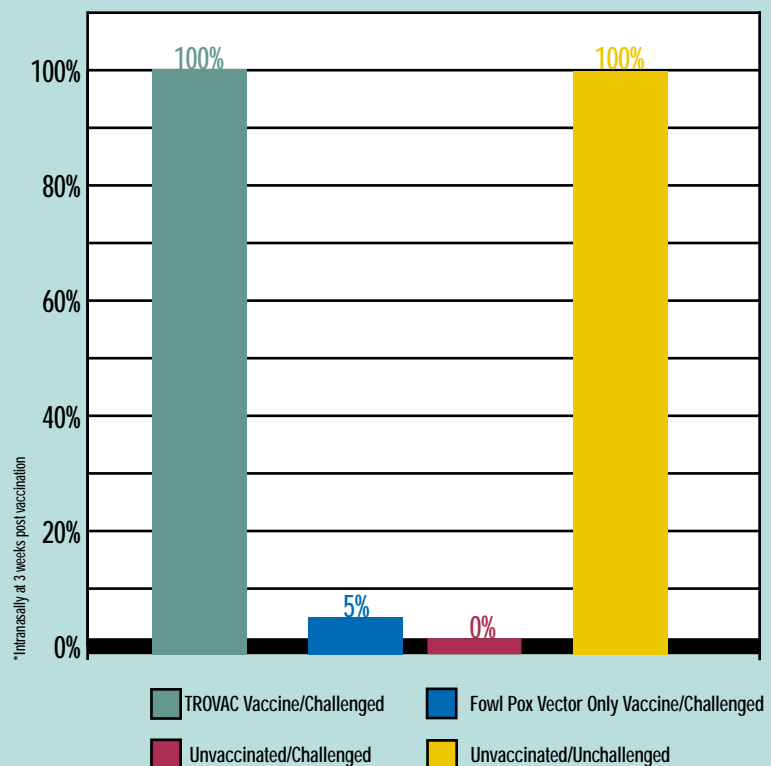

## Efficacy of TROVAC® - AIV H5

Prevention of Morbidity Following AI Challenge\*

## Efficacy of TROVAC® - AIV H5

Prevention of Mortality Following AI Challenge\*

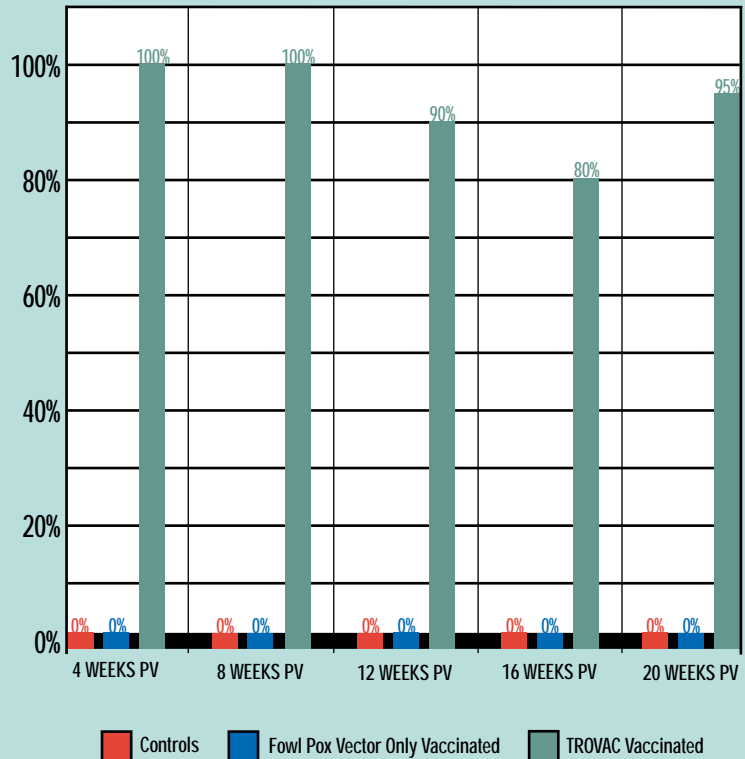

### Feature 3

Provides long-term immunity of up to 20 weeks

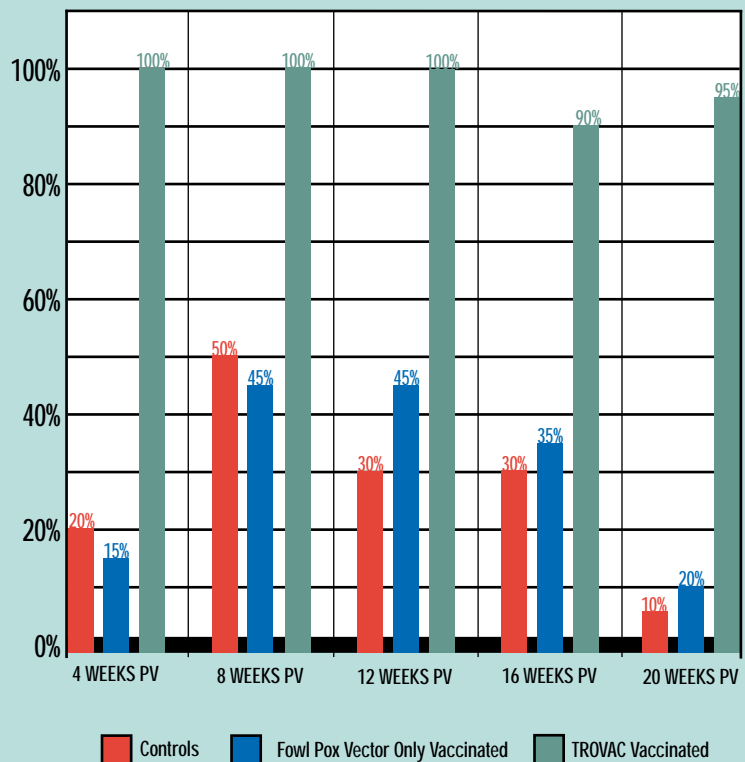

### Benefits

- No other vaccination needed in broilers
- Can provide protection for pullets until inactivated vaccine is administered

### Duration of Immunity of TROVAC® - AIV H5 Prevention of Morbidity Following AI Challenge

### Duration of Immunity of TROVAC® - AIV H5 Prevention of Mortality Following AI Challenge

## Feature 4

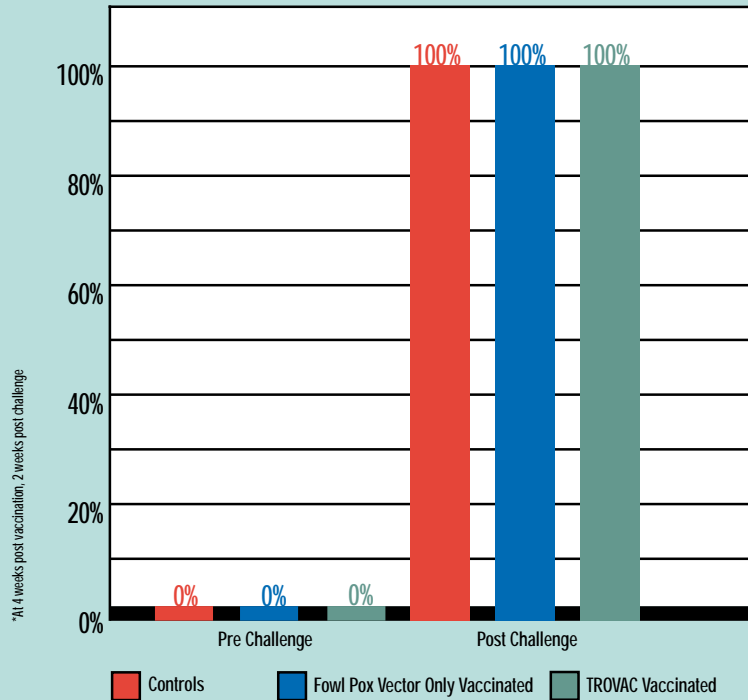

Does not interfere with disease surveillance programs

### Benefits

- Allows the use of common serological tests to distinguish vaccination from disease
- Does not cause a positive result on AGP and ELISA tests

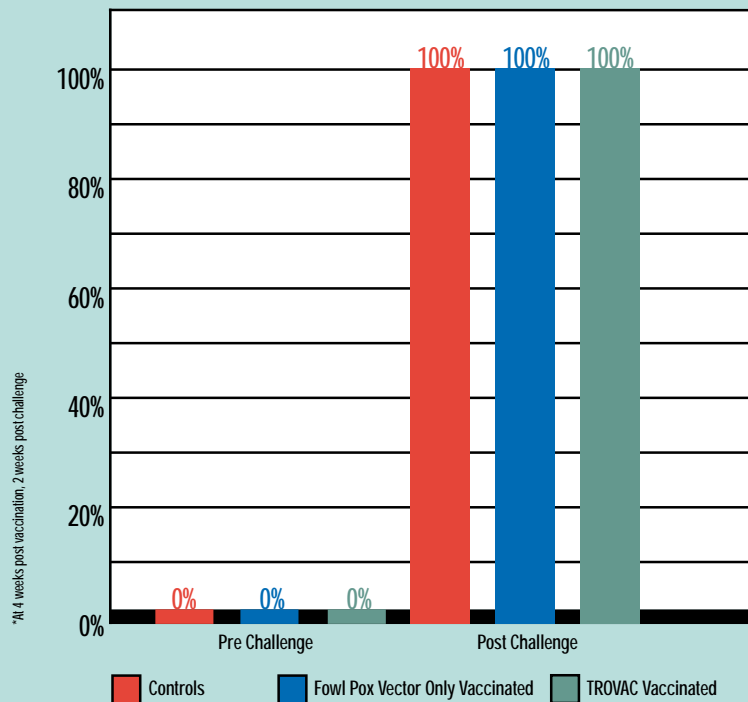

## Seroconversion Following HPAI Challenge\*

Agar Gel Precipitin Test

## Seroconversion Following HPAI Challenge\*

Hemagglutination Inhibition Test
