

Bolegg Terrace

Aviary system for layers

The Bolegg Terrace is a compact, but complete aviary system for layers which can be placed in adjacent rows in the house. Laying nests, perches, feeding and drinking lines and manure belts are integrated into the system. The special system design allows birds to move up easily. The system allows a higher bird density compared to normal floor housing. With the high quality integrated Vencomatic nests, floor eggs and second quality eggs are reduced to a minimum.

Compact but complete system

- Integrated laying nests, perches, feeding and drinking lines
- Stimulates natural bird behaviour
- Frequent manure removal possible
- Simple techniques for less maintenance

House layout with a good overview

- Wide inspection alleys possible
- Fits every house width
- Good spread of birds in the system

High quality laying nests

- Vencomatic Classic Nest
- Self-cleaning nest pad thanks to moveable floor
- Open structured Vencomat floor gives clean eggs
- Optimised nest and egg belt inspection

Good start-up period

- Feeding and drinking lines easy to reach
- Birds easily adapt to the system

Excellent results

- More first quality eggs
- Low percentage of floor eggs
- High production level
