

# RED-L System

## Aviary system for layers

RED-L stands for Resting, Eating, Drinking and Laying. This second-generation aviary system for layers, with a patented porch design, is accessible on all levels and allows a higher bird density, compared to normal floor housing. Integrated nests and the possibility to train the birds in the system ensures the number of floor eggs is reduced to an absolute minimum. The special design combined with the easy escape possibilities and availability of 100% floor space allows natural bird behaviour and provides good animal welfare.

### Number one aviary system

- Unique patented porch system
- Adaptable to every house width
- Many years of experience
- Natural behaviour with the 'tree-design'
- Nest, feeding and drinking lines available at multiple levels

### Poultry manager friendly

- Good overview in the system
- Easy nest inspection
- Low maintenance and easy to clean
- Frequent manure removal possible

### Excellent results

- Low percentage of floor eggs
- More first quality eggs
- Self-cleaning nest pad thanks to moveable floor
- High production level
