## Aviary rearing system for layers

Aviary rearing system for commercial layers which optimizes the development of pullets destined for transfer to aviary layer production houses. The system is designed around the needs of the young birds as well as the working environment of the poultry farmer. At the start of the rearing cycle birds are housed in the system at an easy controllable level. The birds gradually learn to jump within the system encouraged by slowly increasing the height difference between feeding and drinking lines and via winchable platforms.

### Uniform aviary rearing

- Specialized aviary rearing
- Uniformity in the flock
- Strong and healthy birds

### Teaches the birds to jump

- Variable height with winchable platform
- Gradually increasing height differences
- Feeding and drinking lines at different levels

### Clean and hygienic rearing

- Frequent manure removal with manure belts
- Hygienic plastic slats or wire mesh flooring

### Poultry farmer friendly system

- Easy inspection of the birds
- Trouble free catching of the birds
- Quick and easy vaccination of the birds
