

€asy Nest

Automatic nest with moveable back wall

The €asy Nest is an automatic nest with a moveable back wall to close the nest which prevents broodiness in the laying hen. The membrane at the base of the back wall ensures no eggs are left in the nest after it has been closed. The egg belt, located in the middle of the nest, transports the eggs to the front of the house. The simplicity of the design makes the nest quick and easy to install, and also ensures a perfect price/performance ratio.

Ideal nest for breeders

- Many years of experience world-wide
- Comfortable and attractive for the hen to lay her egg
- Easily accessible for the birds
- Minimum number of floor eggs

Clean and hygienic eggs

- Open structured Vencomat floor gives clean eggs
- Daily egg removal ensures no eggs left in nest
- Egg belt with square holes for minimum contact
- Egg collision protection between the egg belts

Durable and low maintenance

- Designed for quick and easy installation
- Solid rack and pinion safety mechanism for nest closing
- Durable and welfare friendly materials
- Vital parts are easy to reach for maintenance
- Fast and easy cleaning of the nest
