

Turkey Nest

Automatic nest for turkey breeders

Automatic nest with a moveable floor for turkey breeders. The moveable floor creates the cleanest eggs possible and helps to prevent broodiness. The fundamentals on which the turkey nest has been developed are based on the natural behaviour of the bird. A self closing trap creates the lowest percentage of floor eggs possible.

For heavy and medium size turkey

60% Savings in manpower

Turkey nest with moveable floor to push birds out

Self closing trap to prevent floor eggs

Easy access with a tipping ramp in front of the nest
